SRS Sign-Off			
Responsibility	Name	Signature	Date

Record of Release		
Version No.	Date of Change	Description of Changes
0.1	29-10-2024	Initial SRS document for Anna Darpan on Ticket Mechanism Module
0.2	20-01-2025	Incorporated the changes as per the RFP, updated FRS and feedback received on 12-12-2024
0.3	27-05-2024	Modified the SRS as per the FRS (Version 0.7)

Priority	Low / Medium / High
Reason:	
i.	L1 (Level 1): Basic support, typically the first point of contact. Handles simple and frequently encountered issues, like initial troubleshooting, and basic guidance.
ii.	L2 (Level 2): More specialized support, addressing more complex technical issues that require deeper investigation.
iii.	L3 (Level 3): The most advanced support, involving experts or development teams.

Complexity	Low / Medium / High
Reason:	
i.	Ticket Creation and Assignment
ii.	Ticket Resolution and tracking

1 Introduction

Ticket Mechanism module is tailored to create, track and resolve the complaints within Anna Darpan application.

Ticket Mechanism module with a centralized platform to handle various support requests from logged-in users. With its robust ticketing system, it allows for seamless tracking of issues, and resolutions, ensuring that every ticket request is addressed promptly and efficiently.

By streamlining communication and improving response times, ticket mechanism module supports FCI's commitment to transparency, accountability, and continuous improvement in its operations.

This Software Requirements Specification (SRS) document outlines the functional and non-functional requirements for implementing ticket mechanism module within FCI.

1.1 Scope:

The Ticket Mechanism module of the Anna Darpan system is designed to provide a centralized, automated, and scalable solution for managing service requests and incident tickets raised by end users. The system facilitates the entire lifecycle of a ticket—from creation and classification to escalation, resolution, and closure—across multiple support levels (L1, L2, L3).

The module supports multi-channel ticket logging (web, mobile, call/email), SLA-based escalation, root cause analysis, and user satisfaction tracking. It also integrates with the knowledge base and master data modules to ensure efficient resolution and reporting.

This system is intended to enhance operational efficiency, ensure accountability, and improve user satisfaction by providing real-time tracking, automated notifications, and structured workflows for all stakeholders involved in the support process.

In Scope:

- i. Ticket creation via web and mobile.
- ii. Ticket capturing by helpdesk.
- iii. Role-based ticket assignment and resolution.
- iv. SLA tracking and escalation.
- v. Root Cause Analysis (RCA) for critical, high, and medium tickets.
- vi. Feedback and satisfaction tracking.
- vii. Knowledge base access and its management.
- viii. Configurable category and sub-category master.
- ix. Escalation mechanism by Regional Nodal Officer.

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

1.2 User Classes and Characteristics:

The implementation of the Ticket Mechanism module at the Food Corporation of India (FCI) involves several user classes, each with distinct roles and characteristics. Understanding these user classes is crucial for tailoring the system to meet their specific needs and enhancing overall efficiency in support processes.

User Class	Description	Characteristics
End Users (Anna Darpan Users)	Includes FCI officials, millers, contractors, farmers, and agencies who raise tickets.	- Can create, track, and reopen tickets - Can provide feedback - Access to FAQs only - Varying levels of technical proficiency
Helpdesk Staff	Operate the call/email support channel and create tickets on behalf of users.	- Trained in ticket logging - Can access user details and record calls
L1 Lead	First-level supervisor responsible for ticket classification and assignment.	- Can assign tickets to L1/L2/L3 - Can mark master tickets - Can update severity and categories
L1 Support Staff	First-level support team handling basic issues.	- Access to knowledge base - Can resolve or escalate tickets - Can mark tickets as "Assigned to FCI"
L2 Support Staff	Handles escalated and more complex issues.	- Advanced troubleshooting skills - Can escalate to L3 - Conduct RCA for tickets
L3 Support Staff	Expert-level support for critical and technical issues.	- Deep technical expertise - Handles code-level fixes - Manages change requests - Conducts RCA for tickets
Regional Nodal Officers	FCI officials authorized to escalate specific tickets.	- Can view and escalate tickets - Recommend severity and impact - Limited to escalation functions
System Administrators	Manage master data and configuration.	- Full access to category/sub-category master - Manage escalation matrix and knowledge base - Technical background required

1.3 Dependencies on other Modules

In the Ticket Mechanism module, all modules are fundamentally dependent on the Ticket Management system, as it serves as the core component through which any official within the Food Corporation of India (FCI) can raise, track, and manage support requests. This interdependence ensures that every aspect of the system, from user access and revolves around the efficient handling of tickets, facilitating streamlined communication and effective resolution of issues across the organization.

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

1.4 References

The following documents and activities have been used as key references for the development of the FCI Ticket Mechanism Module in the System Requirement Specification (SRS). These materials provided insights, guidelines, and foundational information for designing the module:

- i. **Functional Requirement Specification (FRS) of Procurement**
FRS of Ticket Mechanism Module provided a comprehensive overview of the module's intended functionalities, user interactions, and relevant business rules.
- ii. **Field Visit & Division meeting held at Headquarters / Zonal Office**
Field visit and Division meeting held at the FCI headquarters and Zonal Office, which played a critical role in shaping this Module by offering a collaborative platform for gathering detailed business requirements.

These references serve as foundational materials for the SRS, ensuring that the Ticket Mechanism Module adheres to FCI's existing processes, legal frameworks, and the operational realities on the ground

1.5 User Interface Requirements

1.5.1 Wireframes

- i. **Overview**
The user interface of the Ticket Mechanism module is predefined and designed to ensure a consistent and intuitive user experience. The interface will adhere to established design principles, providing a clear navigation structure and accessible functionality. All user interactions will be supported by standardized layouts and elements, enabling users to efficiently manage and resolve ticket requests. The interface will be responsive and adaptable to various devices, ensuring usability across desktop and mobile platforms.
- ii. **Wireframes**
Disclaimer: The wireframe for the Ticket Mechanism module serves as a visual blueprint for the application's layout and functionality. It outlines the essential components and their organization within the interface, facilitating user navigation and interaction. The wireframe will include representations of key screens, such as the ticket submission page and ensuring a logical flow of information. Each element will be strategically placed to enhance usability, with attention to accessibility and responsiveness across various devices.
- iii. **Wireframe Annotations**
 - a. **Common Buttons Across the Modules:** The following buttons provide detailed information how the button in the wireframes is handled.
 - I. **Submit:** The form data is saved and sent to the application
 - II. **Cancel:** The form data is discarded, and the action is cancelled

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

- b. **Common Icons Across the Modules:** The following Icons Actions/Operations provide information of how these icons in the wireframes are handled. These icons are wildly used in multiple Wireframes that are recurring.

I. **View:** Users could view the details of the selected form data

- c. **Common Fields Across the Modules:** The following fields provide detailed descriptions of how fields in the wireframes are handled and validated. These fields are used in multiple Wireframes that are recurring.

Sr. No	Field Name	Field Type	Source value	Is Field Mandatory	Validation
1	Submit	Button	NA	Yes	If all mandatory fields are filled
2	Cancel	Button	NA	Yes	Bring back to previous page
3	Export	Button	NA	Yes	In pdf, xml
4	Yes	Button	NA	Yes	NA
5	No	Button	NA	Yes	NA
6	Search	Textbox	User Input	Yes	Max 100-character limit
7	Print	Button	NA	Yes	NA

2 Detailed Requirements along with layout

2.1 Ticket Creation by End User

The Ticket Management module is central to the Ticket Mechanism and encompasses all functionalities related to the creation & tracking. This module aims to facilitate efficient handling of requests from various stakeholders within the Food Corporation of India (FCI).

2.1.1 Detailed Requirements

The ticket creation process in the Ticket Mechanism is designed to be user-friendly and efficient, enabling stakeholders within the Food Corporation of India (FCI) to report issues and requests easily. This process is crucial for ensuring timely support and effective resolution of inquiries.

i. Ticket Creation and Submission

- a. Users shall be able to access a **"Create New Tickets"** section to view and manage their submitted tickets. Each ticket entry shall display:
 - I. Ticket ID
 - II. Title
 - III. Category
 - IV. Sub-Category
 - V. Priority
 - VI. Status
 - VII. Date Created
 - VIII. Last Updated

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

IX. Assigned Support Level (L1/L2/L3)

- b. The system shall provide **real-time notifications** (via email/SMS/system alerts) for key ticket events, including:
 - I. Ticket assignment or reassignment.
 - II. Status changes (e.g., Resolved, Reopened)
 - III. SLA breach escalations
 - IV. Requests for additional information or clarifications
- c. Users shall have the ability to:
 - I. Reopen a ticket within 72 hours of resolution, with an option to add comments.
 - II. Close a ticket manually if satisfied with the resolution.
 - III. View communication history and support responses.
- d. After resolution, the system shall:
 - I. Trigger a feedback form to capture user satisfaction.
 - II. Automatically close the ticket if not reopened within 72 hours.

2.1.2 User Stories

- a. End User (FCI Officials, Millers, Contractors, Farmers, Agencies)
 - I. As an end user, I want to create a ticket via the web or mobile app so that I can report an issue I'm facing.
 - II. As an end user, I want to receive a confirmation with a ticket ID after submission so that I can track it later.
 - III. As an end user, I want to view all my submitted tickets in a "My Tickets" section so that I can monitor their status.
 - IV. As an end user, I want to receive notifications when my ticket is updated so that I stay informed.
 - V. As an end user, I want to reopen a ticket within 72 hours if the issue is not resolved to my satisfaction.
 - VI. As an end user, I want to submit feedback after ticket resolution so that I can rate the support experience.
 - VII. As an end user, I want to access FAQs so that I can try resolving common issues myself.
- b. Helpdesk Staff
 - I. As a helpdesk staff member, I want to create a ticket on behalf of a user who calls or emails so that their issue is logged.
 - II. As a helpdesk staff member, I want to validate the user's identity using email, mobile number, or employee ID so that I can fetch their details.
 - III. As a helpdesk staff member, I want the system to record calls and retain them for a defined period so that they can be reviewed if needed.

2.1.3 Use Cases

2.1.3.1 Create Ticket

- i. **Actors:** Anna Darpan End User.

Coforge	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

- ii. **Preconditions:** User is logged into the Anna Darpan.
- iii. **Main Flow:**
 - a. User selects "Create New Ticket" from the main dashboard.
 - b. User fills in the ticket submission form, entering all required information.
 - c. User clicks "Submit"
 - d. System validates the input and creates a new ticket.
 - e. The system generates a unique ticket ID and displays a confirmation message.
- iv. **Acceptance Criteria:** User successfully submits a ticket and receives a confirmation message with a ticket ID.
- v. **Postconditions:** A new ticket is created and stored in the system, visible in the user's ticket list.
- vi. **Ticket ID Nomenclature:**
AD/000001/25
 Here,

AD stands for Anna Darpan
 000001 is a ticket sequence number
 25 is the calendar year in which ticket got generated

2.1.3.2 Capture Ticket by Helpdesk

- i. **Actors:** Helpdesk.
- ii. **Preconditions:** Helpdesk User is logged into the Anna Darpan.
- iii. **Main Flow:**
 - a. User selects "Create New Ticket" from the main dashboard.
 - b. User fills in the ticket submission form, entering all required information.
 - c. User clicks "Submit"
 - d. System validates the input and creates a new ticket.
 - e. The system generates a unique ticket ID and displays a confirmation message.
- iv. **Acceptance Criteria:** User successfully submits a ticket and receives a confirmation message with a ticket ID.
- v. **Postconditions:**
 - I. A new ticket is created and stored in the system, visible in the user's ticket list.
 - II. System auto record the calls received from End User.

2.1.3.4 Ticket Feedback Submission

- i. Actors: Anna Darpan End User
- ii. Preconditions:
 - a. The ticket has been marked as "Resolved" by the support team.
 - b. The feedback window (72 hours) is still open.
 - c. The user is logged into the Anna Darpan portal or mobile app
- iii. Main Flow:
 - a. The system sends a notification/email to the end user requesting feedback on the resolved ticket.
 - b. The user logs into the system and navigates to the "Ticket History" section.
 - c. The user selects the resolved ticket and clicks on the "Submit Feedback" button.
 - d. The system displays the Customer Satisfaction Form.
 - e. The user fills in the form and clicks "Submit".
 - f. The system stores the feedback and marks the ticket as "Closed" if not reopened.
- iv. Alternate Flow:

If the user does not submit feedback within 72 hours, the system automatically closes the ticket and marks feedback as "Not Provided".
- v. Acceptance Criteria:
 - a. The feedback form is accessible only for resolved tickets.
 - b. The form is submitted successfully and stored in the system.
 - c. The ticket is marked as "Closed" after feedback submission or auto-closure.
- vi. Postconditions:
 - a. Feedback is recorded and available for MIS reporting.
 - b. Ticket status is updated to "Closed".

2.1.3.4.1.1 User Interaction Flow

(Not Applicable)

2.2 Ticket Assignment and Management by L1 Lead

2.2.1 Detail Requirements

The L1 Lead plays a pivotal role in classifying and routing tickets to the appropriate support level. This ensures that issues are addressed by the right team based on severity and complexity.

- i. Ticket Classification and Assignment
 - a. L1 Lead shall access a dashboard listing all newly submitted or escalated tickets.
 - b. The L1 Lead shall be able to:
 - I. View ticket metadata (ID, Title, Category, Sub-category, Priority, Submitted By, Date)
 - II. Update Category, Sub-category, and Severity
 - III. Assign tickets to L1, L2, or L3 support
 - IV. Mark a ticket as a Master Ticket and link duplicate tickets
 - V. Add remarks during classification
 - c. The system shall:
 - I. Maintain a log of all changes made by the L1 Lead
 - II. Trigger notifications to the assigned support staff
 - III. Start SLA timer based on severity (or from escalation time if applicable).

2.2.2 User Stories

- i. L1 Lead
 - a. As an L1 Lead, I want to classify tickets by severity and category so that they are routed correctly.
 - b. As an L1 Lead, I want to assign tickets to L1, L2, or L3 support so that the right team handles the issue.
 - c. As an L1 Lead, I want to mark a ticket as a Master Ticket and link duplicates so that recurring issues are tracked together.
 - d. As an L1 Lead, I want to update ticket severity based on FCI input so that SLA calculations are accurate.

2.2.3 Use Cases

2.2.3.1 Dashboard for Helpdesk

- i. **Actors:** L1 Lead/L1/L2/L3
- ii. **Preconditions:** User is logged into the Anna Darpan.
- iii. **Main Flow:**
 - a. User enters the login credentials.

Coforge	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

- b. System successfully validates the user and allow the access to login in Anna Darpan.
- iv. **Acceptance Criteria:** User successfully logs into the system.
- v. **Postconditions:** Helpdesk user know the consolidated figure on status of Tickets.

2.2.3.2 Classify and Assign Ticket

- i. **Actors:** L1 Lead
- ii. **Preconditions:** Ticket is submitted and unassigned.
- iii. **Main Flow:**
 - a. L1 Lead opens the ticket dashboard
 - b. Reviews ticket details
 - c. Updates severity, category, sub-category
 - d. Assigns to appropriate support level
 - e. Adds remarks and submits
- vi. **Acceptance Criteria:** Ticket is updated and assigned; notifications are triggered.
- vii. **Postconditions:** Ticket is routed to the assigned support level.

2.3 Master Ticket Management and Linking Related Tickets

2.3.1 Detailed Requirements

To efficiently manage recurring issues reported by multiple users, the system allows the L1 Lead to mark a ticket as a Master Ticket and link other tickets with the same issue to it. This helps in centralized resolution, avoids duplication of effort, and ensures consistent communication with affected users.

- i. Master Ticket Identification and Linking
 - a. The L1 Lead shall:
 - I. Identify tickets with the same issue
 - II. Mark one of them as the Master Ticket
 - III. Link all other related tickets to the Master Ticket

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

IV. Assign severity to the Master Ticket based on the total number of users affected

b. The system shall:

- I. Automatically close the linked tickets and notify users that their issue is being tracked under the Master Ticket
- II. Allow users to track the status of the Master Ticket via their original ticket ID
- III. Maintain a log of all linked tickets and their relationship to the Master Ticket.

2.3.2 User Stories

i. L1 Lead

- a. As an L1 Lead, I want to mark a ticket as a Master Ticket so that I can manage recurring issues efficiently.
- b. As an L1 Lead, I want to link other tickets with the same issue to the Master Ticket so that resolution is centralized.
- c. As an end user, I want to be notified when my ticket is linked to a Master Ticket so that I know my issue is being addressed.

2.3.3 Use Cases

2.3.3.1 Mark Master Ticket and Link Related Tickets

- i. **Actors:** L1 Lead.
- ii. **Preconditions:** Multiple tickets with the same issue are submitted.
- iii. **Main Flow:**
 - a. L1 Lead reviews submitted tickets
 - b. Identifies a recurring issue
 - c. Marks one ticket as the Master Ticket
 - d. Links other related tickets to the Master Ticket
 - e. Assigns severity to the Master Ticket
 - f. System closes the linked tickets and notifies users
- iv. **Acceptance Criteria:**
 - a. Master Ticket is created and visible in the system
 - b. Linked tickets are closed with reference to the Master Ticket
 - c. Users are notified with the Master Ticket ID.
- v. **Postconditions:**
 - a. All related tickets are tracked under a single Master Ticket
 - b. SLA is applied to the Master Ticket only.

2.4 Ticket Resolution by L1 Support

2.4.1 Detailed Requirements

L1 Support staff are responsible for resolving basic issues and escalating unresolved ones.

Coforge	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

- i. Ticket Handling
 - a. L1 Support shall:
 - I. View assigned tickets
 - II. Access the knowledge base
 - III. Add comments and resolution details
 - IV. Escalate to L2 if unresolved
 - V. Mark ticket as "Assigned to FCI" if applicable
 - b. The system shall:
 - I. Track time spent on each ticket
 - II. Trigger notifications on resolution or escalation

2.4.2 User Stories

- i. L1 Support Staff
 - a. As an L1 support staff member, I want to view and resolve tickets assigned to me so that I can provide initial support.
 - b. As an L1 support staff member, I want to escalate tickets to L2 if I cannot resolve them.
 - c. As an L1 support staff member, I want to mark tickets as "Assigned to FCI" if the issue is outside our scope.

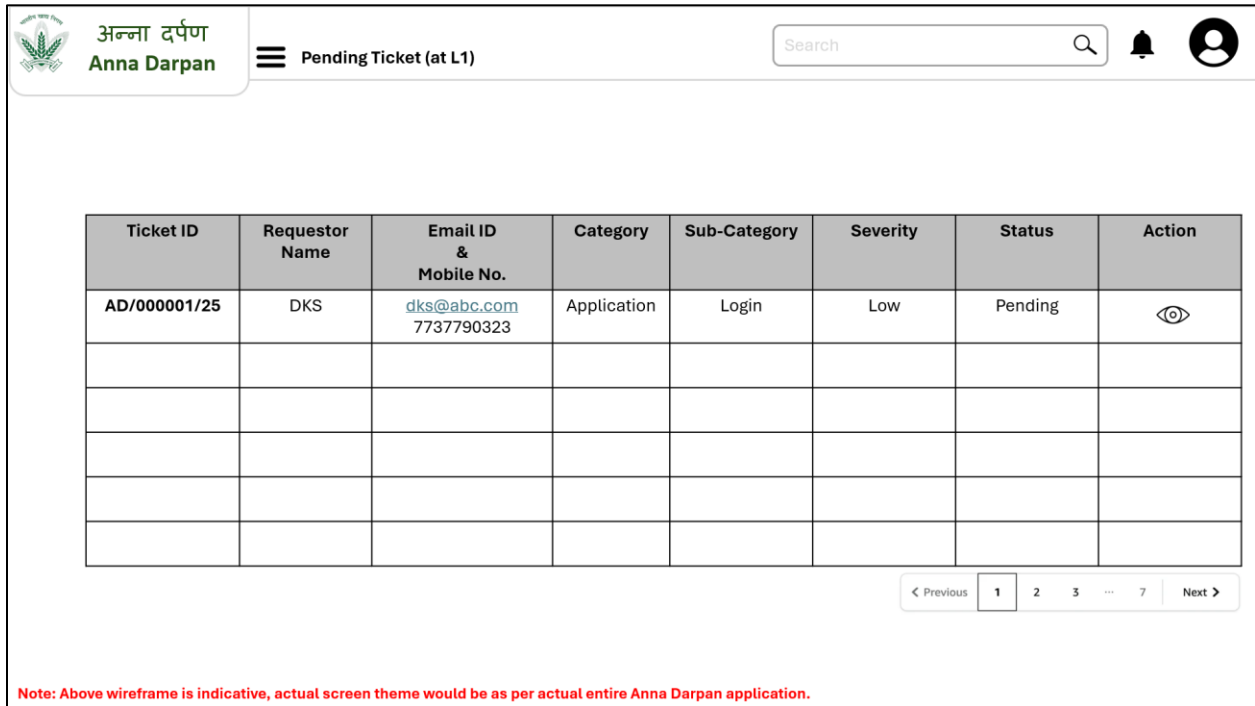

2.4.3 Use Cases

2.4.3.1 Resolve or Escalate Ticket

- i. Actors: L1 Support Staff
- ii. Preconditions: Ticket is assigned to L1
- iii. Main Flow:
 - a. L1 opens ticket
 - b. Reviews issue and attempts resolution
 - c. Adds resolution notes or escalates
 - d. Marks ticket as resolved or escalated
- iv. Acceptance Criteria: Ticket is resolved or escalated with proper documentation
- v. Postconditions: Ticket status is updated.

2.5 Ticket Resolution by L2 Support

2.5.1 Detailed Requirements

L2 Support handles escalated tickets requiring deeper technical analysis.

- i. Ticket Handling
 - c. L2 Support shall:
 - I. View escalated tickets
 - II. Access the knowledge base
 - III. Add resolution details
 - IV. Escalate to L3 if unresolved
 - V. Submit RCA for high/medium severity tickets

2.5.2 User Stories

- i. L2 Support Staff
 - a. As an L2 support staff member, I want to analyze and resolve complex tickets so that issues are addressed thoroughly.
 - b. As an L2 support staff member, I want to escalate tickets to L3 if needed.
 - c. As an L2 support staff member, I want to submit RCA for high and medium severity tickets.

2.6 Ticket Resolution by L3 Support

2.6.1 Detailed Requirements

L3 Support handles the most complex issues, including code-level debugging and change requests.

- i. Ticket Handling
 - a. L3 Support shall:
 - I. View escalated tickets
 - II. Access the knowledge base
 - III. Resolve issues or mark as change requests
 - IV. Submit RCA for critical tickets

2.6.2 User Stories

- i. L3 Support Staff
 - a. As an L3 support staff member, I want to resolve critical or technical issues that require code-level changes.
 - b. As an L3 support staff member, I want to mark a ticket as a change request if it requires system modifications.

2.7 Knowledge Base

The Knowledge Base serves as a centralized repository for information, documentation, and solutions that can be accessed by both support users and end-users. It aims to reduce ticket volume by empowering users to find answers to common issues independently and providing users with quick access to solutions, improving efficiency and response times.

2.7.1 Detailed Requirements

Knowledge Base should allow users, including support users to create, edit, and delete knowledge base articles, ensuring that the content remains relevant and up-to-date.

2.7.2 User Stories

- i. As a support user, I want to quickly find and link knowledge base articles to my tickets, so I can provide faster resolutions.
- ii. As an admin, I want to create and categorize knowledge base articles, so that users can easily find relevant information

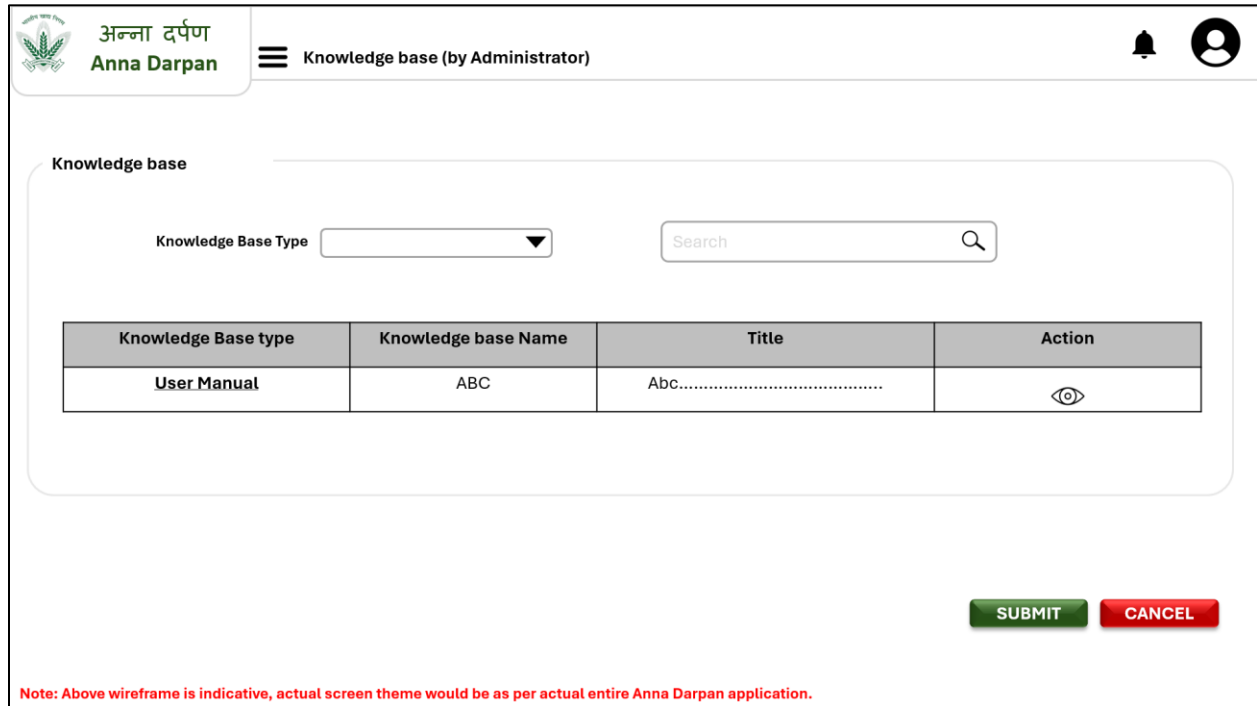

2.7.3 Use Cases

2.7.3.1 Search Knowledge Base

- i. **Actors:** End-user, Support user
- ii. **Preconditions:** User is logged into the system.
- iii. **Postconditions:** User views search results for articles.
- iv. **Main Flow:**
 - a. User enters a keyword in the search bar.
 - b. System processes the query and retrieves relevant articles.
 - c. User browses the list of search results and selects an article.
 - d. System displays the selected article.
- v. **Postconditions:** Required article is found for reference.

2.8 Notifications

Notifications are essential for keeping users informed about the status of support tickets. They facilitate communication between end-users and support staff, ensuring that everyone is aware of ticket updates, assignments, and resolutions. Effective notification mechanisms help improve response times, enhance user satisfaction, and streamline the overall support process.

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

2.8.1 Detailed Requirements

- i. **Ticket Generation:** When a new support ticket is created by an end-user, an automatic notification is triggered. This notification is sent to the user confirming that their ticket has been successfully submitted, along with a unique ticket ID for reference.
- ii. **Ticket Assignment to L1 Lead, L1 to L2 or L2 to L3:** Upon ticket escalation from a Level 1 (L1) support user to a Level 2 (L2) support user, a notification is sent to the L2 user. This notification includes details about the ticket, such as the ticket ID, issue description, priority level, and any additional comments from the L1 user. Additionally, the end-user receives a notification indicating that their ticket has been escalated and is now being handled by a higher-level support user.
- iii. **Ticket Resolution:** When a ticket is resolved, an automatic notification is sent to the end-user, informing them that their issue has been addressed. This notification includes a summary of the resolution and instructions for any follow-up actions required. The support team also receives a notification summarizing the resolution details for internal tracking and quality assurance.

2.8.2 User Stories

- i. As an end-user, I want to receive a confirmation email when I submit a ticket, so I know that my request has been submitted and logged.
- ii. As an end-user, I want to receive a notification when a ticket is escalated to L2 user from L1 user.
- iii. As a Level 1 support user, I want to be notified when a ticket is assigned to me, so I can prioritize my workload accordingly.
- iv. As a Level 2 support user, I want to be notified when a ticket is assigned to me, so I can prioritize my workload accordingly.
- v. As an end-user, I want to receive a notification when my ticket is resolved, so I can understand how my issue was addressed and if further action is needed.

2.8.3 Use Cases

- i. **Use Case 1: Ticket Generation Notification**
 - a. **Actors:** End-user, System
 - b. **Preconditions:** End-user submits a new ticket.
 - c. **Postconditions:** End-user receives a notification confirming ticket creation.
 - d. **Main Flow:**
 - I. End-user fills out the ticket submission form.
 - II. End-user submits the ticket.
 - III. System generates a confirmation notification.
 - IV. System should send the notification to end-user's registered email as well as on register mobile.
- ii. **Use Case 2: Ticket Assignment Notification**
 - a. **Actors:** Level 1 user, Level 2 user, System
 - b. **Preconditions:** Level 1 user assign a ticket to Level 2.

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

- c. **Postconditions:** L1/L2/L3 Support user receive notifications about the ticket assignment.
- d. **Main Flow:**
 - I. Level 1 user selects a ticket for escalation.
 - II. Level 1 user assigns the ticket to a Level 2 user.
 - III. System generates a notification for the Level 2 user, including ticket details.
 - IV. System sends a notification to the end-user indicating the ticket has been escalated.

iii. Use Case 3: Ticket Resolution Notification

- a. **Actors:** Level 2 user, End-user, System
- b. **Preconditions:** Level 2 user resolves the ticket.
- c. **Postconditions:** End-user and support team receive notifications about the resolution.
- d. **Main Flow:**
 - I. Level 2 user marks the ticket as resolved in the system.
 - II. System generates a resolution notification.
 - III. System sends the notification to the end-user's registered email, summarizing the resolution.
 - IV. System sends an internal notification to the support team with resolution details for record-keeping.

2.9 Root Cause Analysis

2.9.1 Detailed Requirements

Root cause analysis (RCA) in ticket management is a process that identifies the underlying reasons for common issues in customer service tickets. Root cause analysis is required for all critical, High and Medium tickets within SLA limit.

2.9.2 User Stories

- i. User Story 1: L1/L2/L3 have to fill the RCA form
 - a. As a L1/L2/L3 Support User, I want to fill the RCA against the Critical, High, Medium marked tickets.

2.9.3 Use Cases

2.9.3.1 L1/L2/L3 filling RCA form

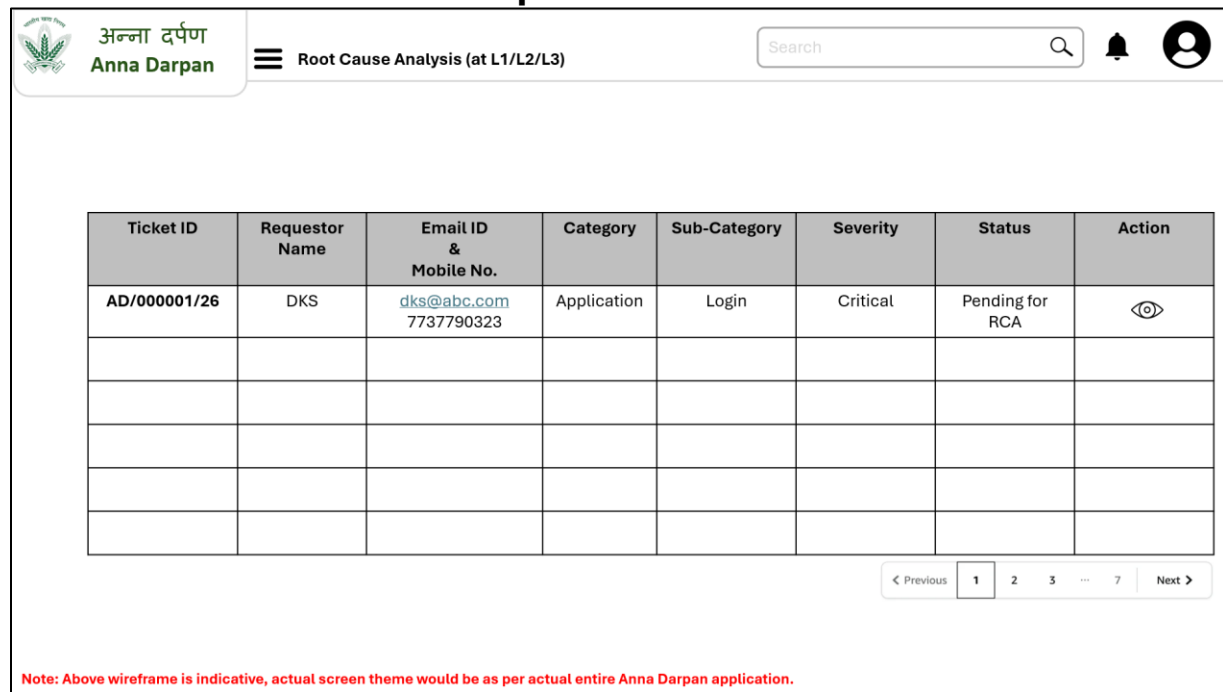

- i. **Actors:** L1/L2/L3 Support User.
- ii. **Preconditions:** The Support User should have resolved the ticket marked with critical, high and medium severity.
- iii. **Main Flow:**
 - a. Support User has to select the RCA menu from Main Menu to access the form.
 - b. The system display the list of resolved tickets (only critical, high and medium marked tickets).

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_ Mechanism_v0.3	Development Object Title	Ticket Mechanism

- c. Support user need to select the ticket to fill the RCA.
- iv. **Postconditions:** The RCA is filled against the Critical, high and medium marked tickets within SLA.

2.10 Master of Category and Sub-Category

2.10.1 Detailed Requirements

In ticket management, categories and subcategories are used to classify and label help desk tickets

- i. **Ticket categories:** Classifications or labels assigned to each help desk ticket. These classifications help customer support teams prioritize and assign tickets more effectively.
- ii. **Ticket subcategories:** Subcategories of ticket categories.

2.10.2 User Stories

- i. User Story 1: Create the master of Category and Sub-category for Ticket Mechanism
 - a. As a Administrator of Anna Darpan, I want to create the category and sub-category of Ticket mechanism module.

2.10.3 Use Cases

2.10.3.1 Administrator to create the Category and Sub-Category master

- i. **Actors:** Administrator of Anna Darpan.
- ii. **Preconditions:** Administrator should have the access of category and sub-category master.
- iii. **Main Flow:**
 - a. Administrator logs in to the system and clicks on Category/sub-category master menu.
 - b. Administrator enters the required detail in the field.
 - c. Submit the data as soon as field is filled.
- iv. **Postconditions:** Category and Sub-category is maintained in system.

2.11 Ticket Escalation by Regional Nodal Officer

2.11.1 Detailed Requirements

Regional Nodal Officers can escalate specific tickets that require urgent attention, recommending severity and impact.

- i. Escalation Workflow
 - a. Nodal Officer selects a ticket and marks it for escalation with:
 - I. Recommended Severity (Critical/High)
 - II. Number of Users Impacted
 - III. Remarks
 - b. IT Division reviews and freezes the final severity.
 - c. L1 Lead receives the escalated ticket and assigns it accordingly.
 - d. SLA starts from the time severity is frozen.

2.11.2 User Stories

- i. As a Regional Nodal Officer, I want to escalate specific tickets so that they are prioritized.
- ii. As an IT Division official, I want to freeze the severity of escalated tickets so that SLA tracking is accurate.

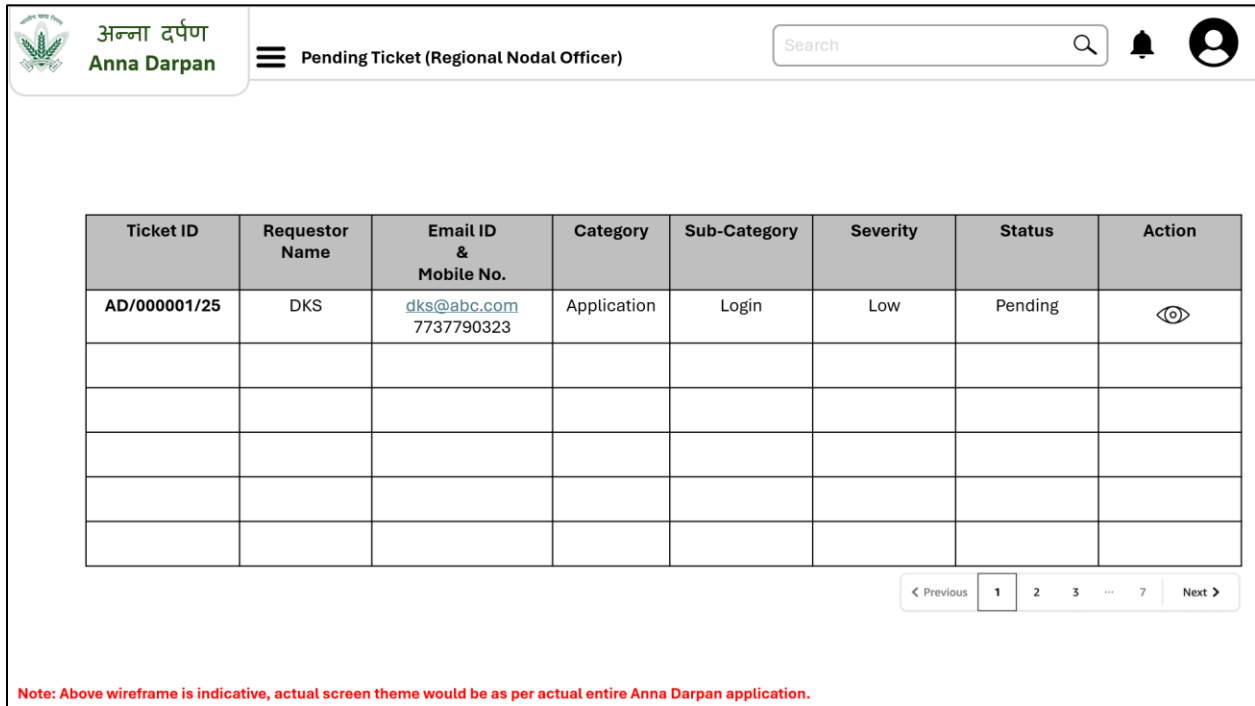

2.11.3 Use Case:

2.11.3.1 Escalate Ticket

- i. Actors: Regional Nodal Officer, IT Division, L1 Lead
- ii. Preconditions: Ticket is submitted and unresolved
- iii. Main Flow:
 - a. Nodal Officer escalates ticket with severity and remarks
 - b. IT Division reviews and freezes severity
 - c. L1 Lead assigns ticket
- iv. Acceptance Criteria: Ticket is escalated and reassigned with updated SLA
- v. Postconditions: Ticket is handled as per new severity.

2.12 Master for User Escalation

2.12.1 Detailed Requirements

The system must automatically escalate tickets to predefined users when the resolution time exceeds the defined Service Level Agreement (SLA) thresholds. This ensures timely attention to unresolved issues and accountability across support levels.

The system shall trigger an automatic escalation to all users listed in the Escalation Matrix for that severity level.

Escalation shall include an email and system notification with ticket details, elapsed time, and current status.

- i. The system shall:
 - a. Maintain a configurable Escalation Matrix Master (managed by Admin).
 - b. Log all escalation events with timestamps.
 - c. Exclude tickets marked as "Assigned to FCI" or "Third Party Dependency" from SLA breach calculations.

2.12.2 User Stories

- i. System (Automated Functionality)
 - a. As the system, I want to monitor SLA timers for all active tickets so that I can detect breaches in real time.
 - b. As the system, I want to escalate tickets to predefined users when SLA is breached so that timely action can be taken.

Coforge	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

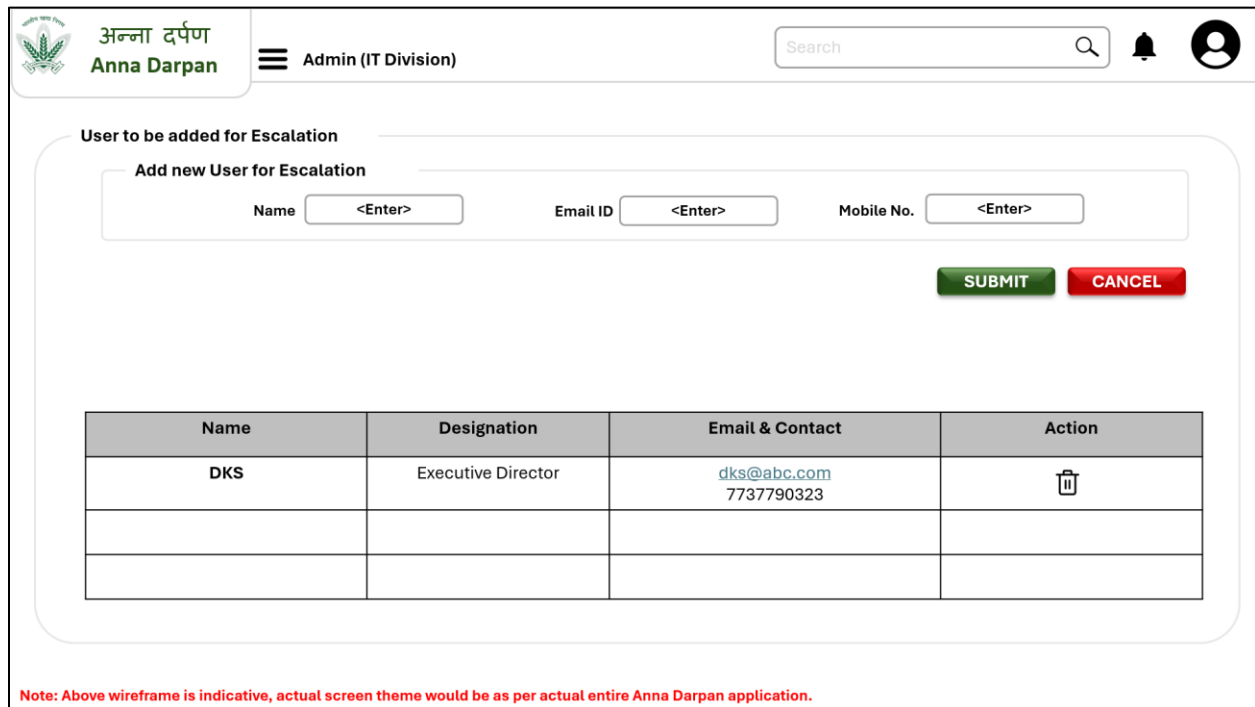

- c. As the system, I want to exclude tickets marked as “Assigned to FCI” or “Third Party Dependency” from SLA breach escalation so that only valid breaches are escalated.
 - ii. Escalation Recipients (Defined Users)
 - a. As an escalation recipient, I want to receive notifications when a ticket breaches SLA.
 - iii. Admin
 - a. As a Admin, I want to add the users in the system so that Escalation can be triggered to them on time.

2.12.3 Use Cases

- i. Actor: Admin
- ii. Pre-condition: Admin should login in the system through valid login credential.
- iii. Main flow:
 - a. Admin add a new User for escalation matrix, so that user can receive the notification on SLA breach.
 - b. Admin need to fill: Name, Designation, Email and Mobile Number.
- iv. Alternative Flow: NA
- v. Post Condition: System should successfully the user in the system.

3 Integration Requirements

Not Applicable

4 Non-Functional Requirements

4.1 Performance Considerations

Sr. No.	Description
1	The application shall respond to user requests within an acceptable timeframe to ensure a smooth user experience.
2	Notifications and updates should be processed and delivered within defined time of an action being taken.
3	Ticket search functionality should return results very fast, regardless of the number of tickets in the system

4.2 Other Considerations

Sr. No.	Description
1	The system must be able to scale horizontally to accommodate an increase in users or tickets without requiring major architectural changes

Coforge	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

2	It should support adding additional server instances to manage increased load during peak times
3	The user interface should be intuitive and user-friendly, allowing users to complete common tasks (e.g., submitting tickets, searching the knowledge base) very fast.
4	The application shall provide meaningful error messages during user management actions to enhance user experience.
5	The application shall log all user actions in the user management module for audit trails and future investigations.
6	The application shall provide user manuals and context-based help for user management functionalities for ease of use.

4.3 Security Requirement

Sr. No.	Description
1	All data transfers should be encrypted using HTTPS to protect sensitive information.
2	The application shall ensure that all user management actions are logged for auditing and accountability.
3	The application shall secure user data using encryption methods to protect sensitive information from unauthorized access.

5 Out of Scope

Any items, features, or functionalities not explicitly covered in the Request for Proposal (RFP) will be considered out of scope for this module.

6 RFP FRS Coverage

State how the requirements discussed in the document cover the FRS requirements listed in the Anna Darpan RFP. More specifically, list any FRS requirements that have been dropped or postponed during the Requirement analysis meetings.

Sr. No	RFP Section No	FRS Section No	SRS Section No
1	K1	3.1	2.1
2	K2	3.2 & 3.3	2.2
3	K3	1.3	2
4	K4	3.3, 3.4 & 3.6	2.2
5	K5	3.2.3	2.3

7 System Dependency

7.1 Description

The ticket mechanism serves as the core system for tracking, managing, and resolving user issues and service requests. It acts as a centralized system to log, prioritize, assign, and monitor issues across different departments or teams. This dependency

	System Requirement Specification		SRS Document
Development Object ID	SRS_AnnaDarpan_Ticket_Mechanism_v0.3	Development Object Title	Ticket Mechanism

ensures streamlined workflows, accountability, and timely resolution of problems. The system relies on integration with external tools (e.g., email) and internal databases to function effectively.

7.2 Assumptions

- i. Ticket IDs are unique and generated systematically to avoid duplication.
- ii. Users have clear roles and permissions to access, update, or close tickets.
- iii. Proper notification are triggered automatically for priority tickets.
- iv. The system complies with defined SLA.

7.3 Positive Impact

- i. Efficient issue resolution and management, resulting in better user satisfaction.
- ii. Improved accountability and tracking with clear ownership of tickets.
- iii. Enhanced data-driven insights from ticket analytics and reports.
- iv. Simplification of cross-functional collaboration with centralized tracking.

7.4 Negative Impact (in case of dependency failure)

- i. Delayed issue resolution due to unavailability or downtime of the ticket mechanism.
- ii. Loss of critical data if the system lacks proper backup and recovery.
- iii. Disruption in workflows and processes dependent on ticket tracking and resolution.
